

Custom Application in IGEL OS 12

You can add custom applications to call up commands through the defined starting methods. For example, you can create a desktop shortcut to run a command.

Custom application commands are executed as `user`.

Menu path: **System > System Customization > Custom Application**

To manage the list of custom applications:

Unable to render {include} The included page could not be found.

→ Click  to add a new custom application session.

Unable to render {include} The included page could not be found.

Under **Custom Application > [Custom Application Name] > Settings**, you can define the command to be run and the icon for the shortcut.

Icon large

Select an icon provided. (Default: applications-other)

Only the desktop icon of a session is customizable. The taskbar icon of a session cannot be customized and will remain the default icon. Complete customization is not possible.

Command

Give the name and path of the application. (Example: `/usr/bin/gpicview`)
